How Do I Fix Discord Infinite Update?

When you update Discord, your computer may become stuck in an endless updating loop. Discord is a complicated app that necessitates a multitude of permissions to update it. It may be a problem with your computer's settings.

You may do a few things to assist in the system's resolution and restore Discord's functionality. The first option is to run your Discord server as an administrator. It may help in jolting the system and enable you to try updating it again.

You might also try disabling some of your computer's settings, such as the Firewall or Windows Defender. It may be why your Discord update isn't installed correctly.

Why does my Discord keep asking me to check for updates?

The most common reason Discord appears to be stuck on checking for updates is that it is slow. It will take some time to scan for any system upgrades thoroughly.

Discord's downloads range in size from small to large. It is determined by a variety of factors, including your internet connection. It could indicate that Discord is temporarily sluggish. It may affect the speed with which it can scan for updates and then download them to your device. You have a few options for resolving the problem:

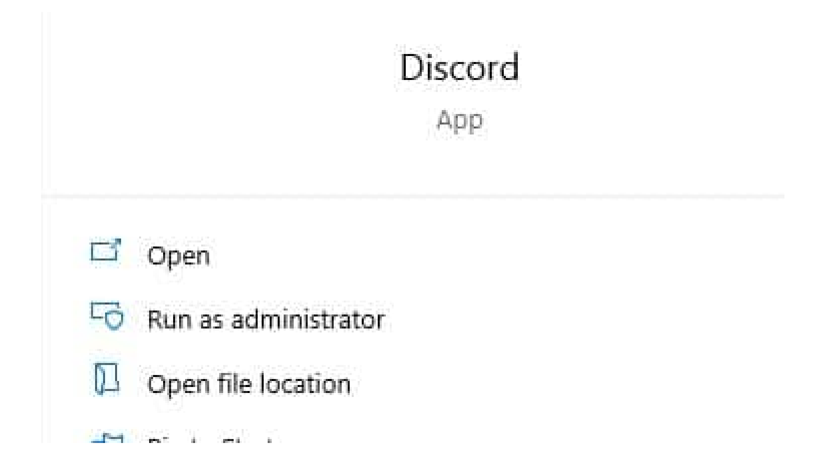

- Discord should be reinstalled and then reinstalled again.
- As an admin, start Discord.
- Log out and then back into Discord.

How to update Discord App on Windows?

An automatic Discord update is the quickest and most straightforward way to update Discord. It is a simple task. You can use this guide to help you:

- Open and update Discord on PC.
- If you've made a Discord shortcut, you may just double-click it to access it.
- You can also type Discord into the Windows search icon or bar. The Discord application can be found in the search results. You may open the Discord window by clicking it.

- If there are any available updates, Discord will begin the update process automatically. It starts by checking for updates.

- Then it starts downloading and installing the updates automatically. You should wait until the entire procedure is completed.
- When the update is finished, there will be presented with an interface that displays the new software updates. You can close the interface and go straight to the software.

How to update Discord App on Mac?

When it comes to updating Discord, both Mac and Windows follow the same procedure. Because the interface is the same, you won't see the 'Update' button here either. To check for an update, you can either relaunch or reload the application, much like Windows.

- The Discord app window is pinned to your Dock on your Mac.
- To access the settings menu, click on the application.
- Simply shut down Discord. It would completely stop the process.
- Relaunch the application by clicking it, and it will automatically check for updates.
- On the Mac, relaunching is also an option. You may just enlarge the Discord window and press "Command + R" if you don't want to exit the app.

It will ensure that your app is reloaded. It would seek any new updates and install them if they were detected after reloading.

How to Update Discord App on iPhone?

When it comes to Discord software updates, iPhone users only have one option.

- Open the **App Store**, find the app, and hit the 'Update' button.
- When the download is complete, iOS will automatically install the update for you.
- You can also look for the Discord software in the Apple App Store by hand. All you need to perform now is go to the app's page and tap the 'Update' button.

How to Update Discord App on Android Device?

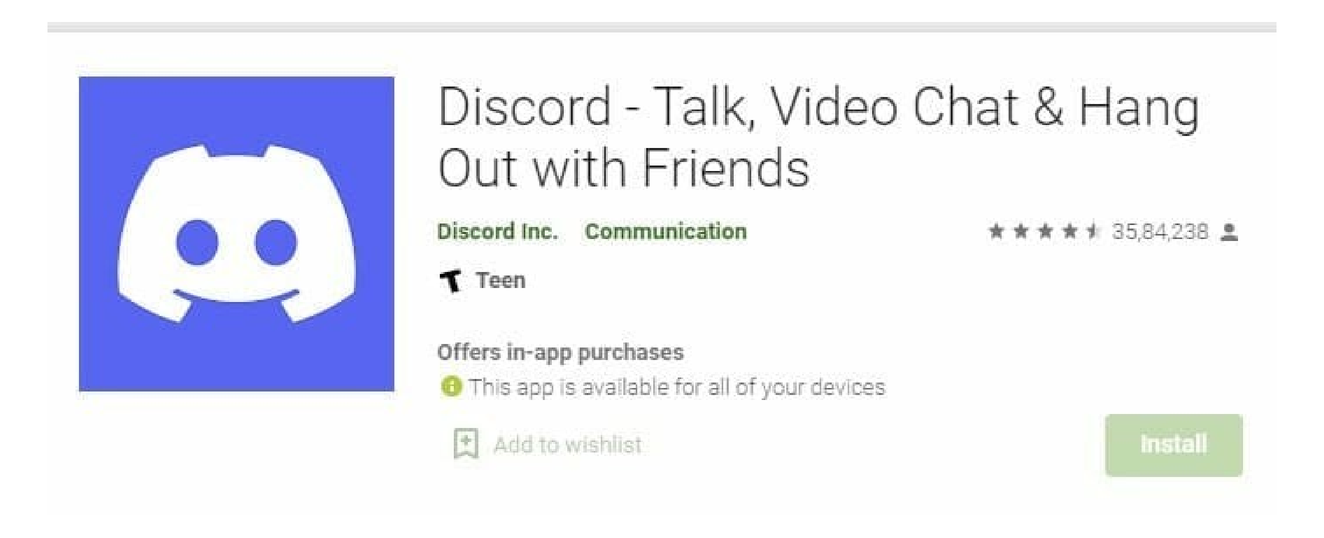

Discord is also available on mobile devices, such as Android. It also lacks an 'Update' button, just like the desktop clients. You have enough battery to carry a version that is ready to install. You'll need to go to the Google Play Store to download the app. Install the most recent version of the program.

- Access the Discord app on the Play Store.
- Then simply press the update button.

Additional method

- Manually go to the Discord app page in the **Play Store (⇐click here).**

- On your Android smartphone, open the Google Play Store app.
- After that, look for Discord. Tap update after opening the Discord app listing.

How to Update Discord App on Chromebook?

Chromebooks can run Android apps. You can get the Discord app from the Google Play Store with ease. Updating is equally simple, as you only need to search for the app on the Play Store and then tap the green 'Update' button.

- On the Play Store, there is direct access to Discord.
- If installing the app isn't an option, you may always use Discord.com to complete the task.
- You won't have to bother about web client updates. The server-side updates are applied. It works without the need for active user participation.

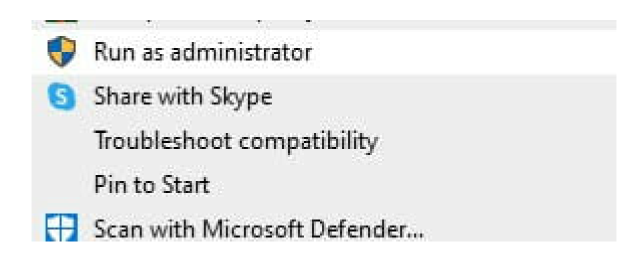

Discord App Update errors

Here are a few fixes that you can use if you find Discord not updating.

1. Launch Discord App As Admin

When a program isn't working, there's a simple approach that many computer users are aware of. Give that nudge to disharmony. Run the software as an administrator if possible. It may appear harsh, but it isn't, and it could be the key to getting you back into the game.

- When you right-click on the Discord icon on your desktop, you'll have the option to "Run as administrator."

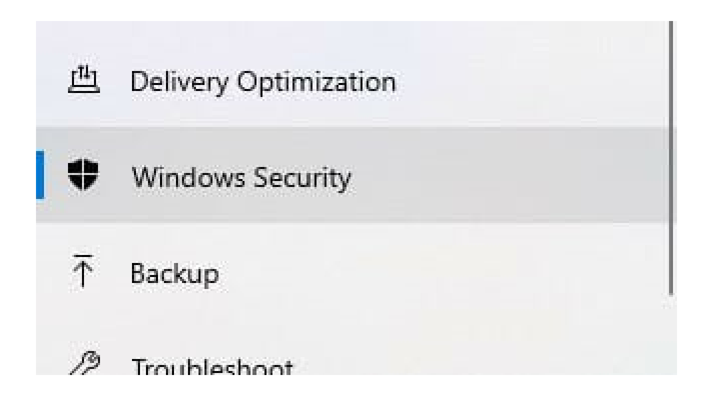

- When you choose "Run as administrator," a box will appear asking if you agree to the app making changes to your device. Click "Yes" when you see this new window.
- Discord App will start operating, and the upgrade should be finished soon.

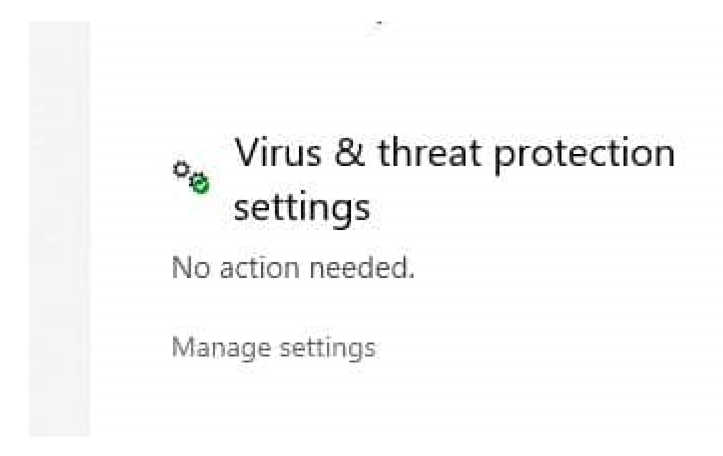

2. Disable Windows Defender

Windows includes a built-in antivirus system called Windows Defender. It defends the system from harmful software. It can be a stumbling block when it comes to updating Discord. So, disable Windows Defender by following the steps below and see if the problem is resolved.

- To open the Settings window, type ‘settings’ in the Windows search box and hit Enter.
- To expand the ‘Update and Security’ area, click it and select ‘Windows Security.’

- Select ‘Manage Settings’ from the ‘Virus and Threat’ protection link.

- To disable this feature, swipe the toggle for the ‘Turn on real-time protection’ link.

Real-time protection
Locates and stops malware from installing or running on your device. You can turn off this setting for a short time before it turns back on automatically.

- Exit the Settings window by clicking the ‘Save’ button.

3. Reinstall Discord.

Running as an administrator fails. You're still having problems with Discord not updating. Try to reinstall Discord software.

- To open the Task Manager window, concurrently press the Ctrl, Shift, and Esc keys.
- Select the Discord process and click the 'End Task' button if it is available.
- To open the Run dialogue box, hold down the Windows key and click 'R.'
- To access a list of applications installed on your computer, type '**appwiz.cpl**' in the Run dialogue box and hit Enter.
- Discord may be located by searching for it, selecting it, and tapping the 'Uninstall' button.

- Then, following the Discord screen prompts, complete the process.
- Open a new Run program and type in **"%appdata%."**
- Locate the Discord folder, right-click it, and choose 'Delete.'

- If any more prompts occur, accept the action by clicking 'OK' or 'Yes.'
- Double-click the local folder displayed on the computer screen by using the backspace key on the keyboard.
- After eliminating Discord-related files, go to the internet and download the Discord installer.
- Then double-click the Discord to launch the installer. Follow the on-screen directions to install Discord.

Conclusion

Just like any other software, Discord is also a constant development software. I hope you learned how to update the Discord app by following the above methods.
